

ABSTRACT OF THE DISCLOSURE

A TWAIN network image data transmission system and method are applicable in image data transmission between a host and a versatile business machine. The TWAIN network image data transmission is achieved via a network using HTTP. After the versatile business machine retrieves the image data, an image data hyperlink embedded hypertext is generated. When an image data retrieving command is sent from the host, the hypertext is transmitted to the host via the network and a communication interface with hypertext transport protocol.
